Key Responsibilities

- Operate both dry and liquid application equipment using advanced onboard technology to deliver safe, timely, and accurate applications of fertilizer, crop nutrition products, and crop protection products.
- Conduct daily inspections, maintenance, calibration, and cleaning of equipment to maximize efficiency, accuracy, and uptime.
- Operate application equipment independently with a high degree of accuracy and efficiency, including GPS setup, software management, troubleshooting, and minor repairs.
- Ensure accurate product loading, handling, transportation, and application in accordance with company procedures and regulatory requirements.
- Utilize precision agriculture technologies, including GPS guidance systems, application controllers, and mapping software, to optimize application performance.
- Provide operational support and mentorship to junior and seasonal applicators as required.
- Maintain a strong commitment to safety, environmental stewardship, and regulatory compliance during all operations.
- Foster respectful, professional, and customer-focused relationships with customers, vendors, and team members.
- Take ownership of the complete care, cleaning, and maintenance of equipment, ensuring it is operationally ready for the next shift.

Qualifications

- Valid G license; willing to work toward an AZ or DZ license..
- 3+ years of experience operating agricultural equipment; dry and liquid application experience is considered an asset.
- Strong mechanical aptitude, including troubleshooting and minor equipment repairs.
- Experience with GPS guidance systems, precision agriculture technology, and application software.
- Strong communication skills, attention to detail, and the ability to thrive in a fast-paced seasonal environment, including extended hours as required.
- Demonstrated ability to work independently with minimal supervision.
- Pesticide applicator certification or willingness to obtain required licensing is considered an asset.
